

# Tungsten TRYCON AI Global Markets

## Monthly Comment

The strategy was able to profit from the rise in global equity markets in March. The best results were achieved in the S&P 500 and the Dutch AEX Index. Most notably, in the Hang Seng Index and the Indian Nifty 50, the trend-independent models were able to profit on both the long and short side. The positive contribution from trading in government bonds is also mainly explained by an alternation between long and short positions, especially in British and US bonds. In contrast, the portfolio suffered losses in German and Italian government bonds. In currencies, short positions in the JPY and EUR in particular were profitable, outweighing a loss from trades in the Indian rupee. The strategy was able to successfully anticipate the noticeable decline in equity market volatility in March.

## Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

## ESG rating distribution

## Intended product classification according to SFDR: Article 8

- Consideration of ESG & sustainability criteria in the investment strategy
- Scope of the taxonomy regulation
- Exclusion criteria are applied

## Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

## Correlation since 09/2013 (monthly data)

## Key markets

### Top 3 markets

- 1) JPY / USD
- 2) volatility USA
- 3) EUR / USD

### Bottom 3 markets

- 1) 10yr bonds Germany
- 2) 10yr bonds Italy
- 3) INR / USD

(Key futures markets by contribution to performance)

## Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%.
