

Tungsten TRYCON AI Global Markets

Monthly Comment

Amid falling equity markets, the strategy gradually reduced its equity exposure over the course of the month, but suffered losses in particular from long positions in European indices such as the DAX and the SMI. A positive contribution was achieved from trading in the Asian markets, for example in the Nikkei (long) and the Hang Seng (short). The portfolio incurred losses from government bonds. Here, too, contributions from the European markets weighed most heavily, led by the result from the Bund future. The bright spot in this sector was trading in 10-year Canadian government bonds, where the strategy was able to take advantage from falling prices. In currencies, although the portfolio benefited from the rise of the U.S. dollar particularly against the euro and the Mexican peso, losses from the Japanese yen and the British pound (which both depreciated against the U.S. dollar) dominated the sector result.

Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

ESG rating distribution

Intended product classification according to SFDR: Article 8

- Consideration of ESG & sustainability criteria in the investment strategy
- Scope of the taxonomy regulation
- Exclusion criteria are applied

Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

Correlation since 09/2013 (monthly data)

Key markets

Top 3 markets

- 1) equity index Japan
- 2) equity index India
- 3) EUR/USD

Bottom 3 markets

- 1) 10yr bonds Germany
- 2) equity index Germany
- 3) 10yr bonds Australia

(Key futures markets by contribution to performance)

Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%.
