

Tungsten TRYCON AI Global Markets

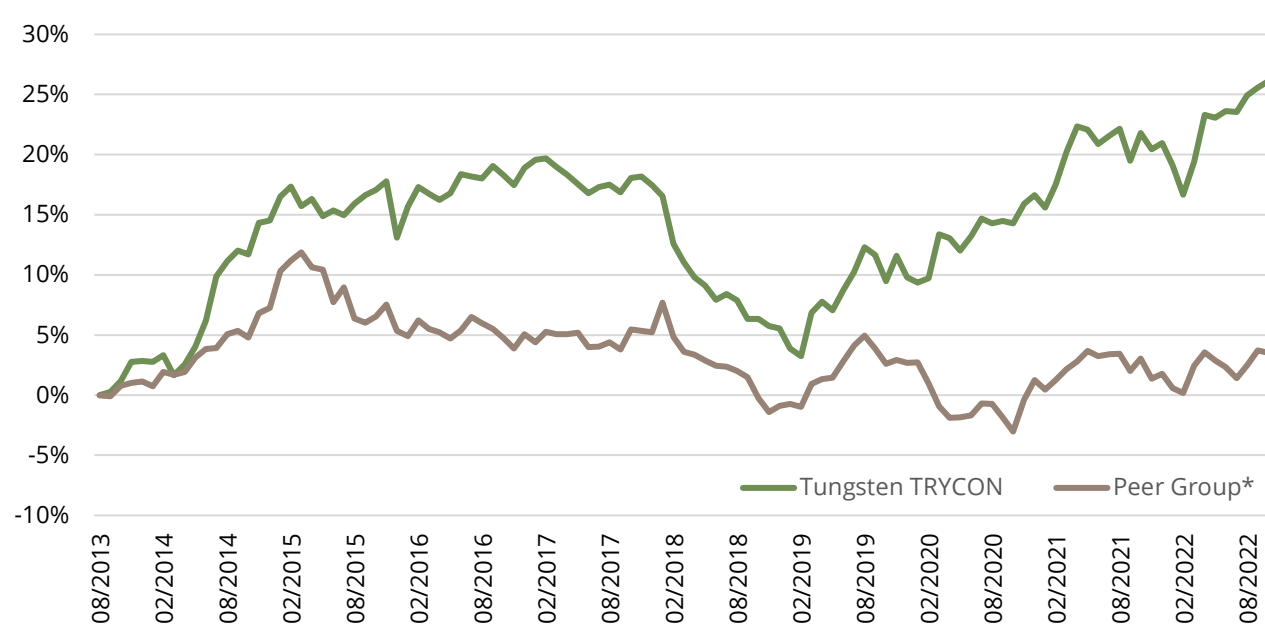

Monthly Comment

In October, the strategy was able to identify profitable trading opportunities mainly in the Asian equity indices, benefiting in particular from the strength of the Nikkei and the Nifty. The portfolio also profited from the rise of the Turkish BIST 30 index. In contrast, it recorded losses mainly from trading in European indices, in particular from a short position in the FTSE MIB. Falling interest rates on Italian government bonds also created headwinds in the portfolio and, together with the result from Australian government bonds, explain the minor loss in the sector. To a large extent, however, the losses were offset by gains the strategy made with an alternation between long and short positions in both the Bund future and U.S. bonds. The portfolio posted a small gain in currencies. Here, the strategy took advantage of the rise in the GBP and the weakness of the JPY, but suffered losses mainly in the NZD and the EUR. Further rising U.S. money market rates and the decline in U.S. equity market volatility by about 6 points also presented the strategy with opportunities for profit.

TUNGSTEN

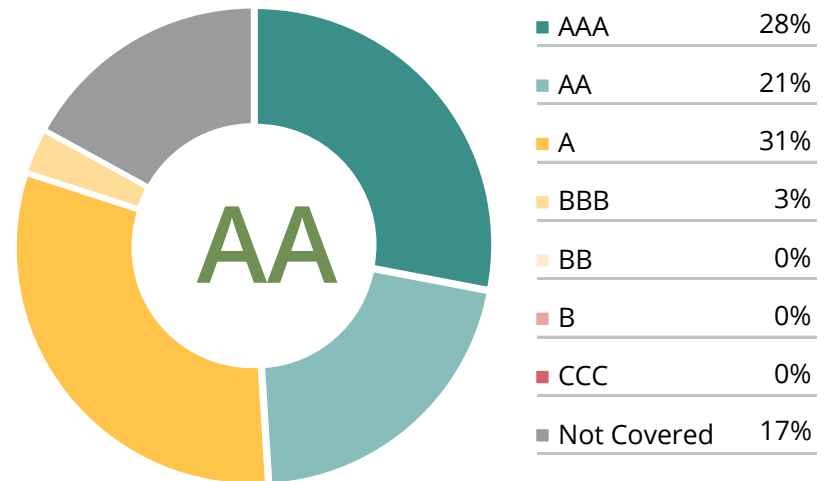

Investment Funds

Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

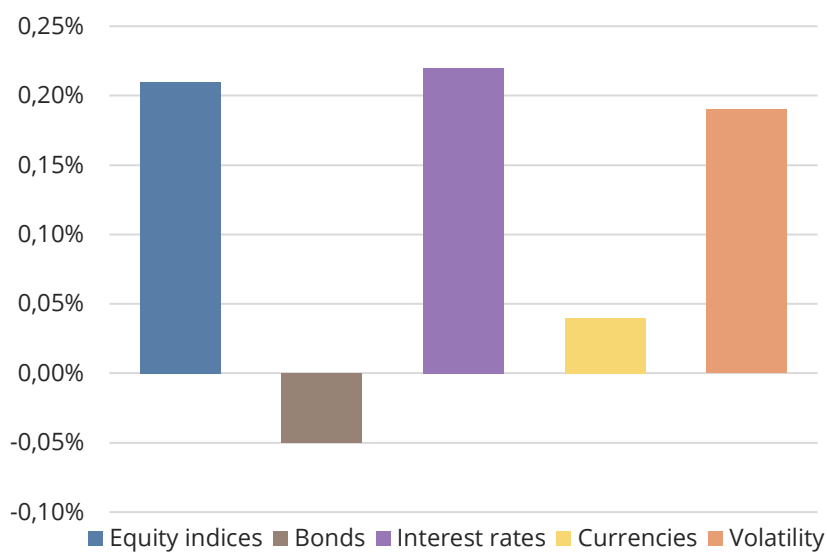

MSCI ESG rating and distribution

Product classification according to SFDR: Article 8

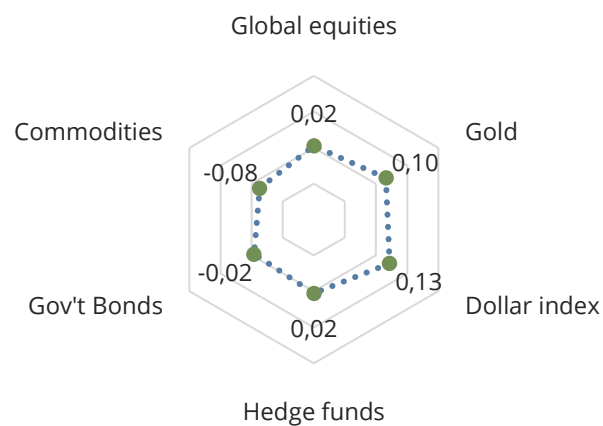

- Consideration of ESG & sustainability criteria in the investment strategy
- Scope of the taxonomy regulation
- Exclusion criteria are applied

Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

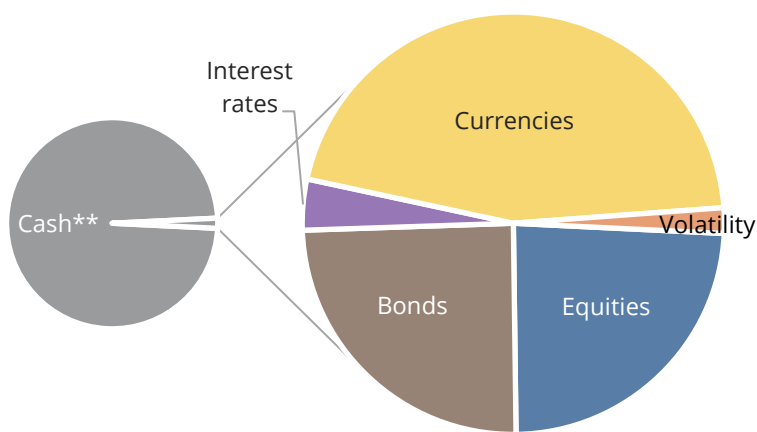

Correlation since 09/2013 (monthly data)

Key markets

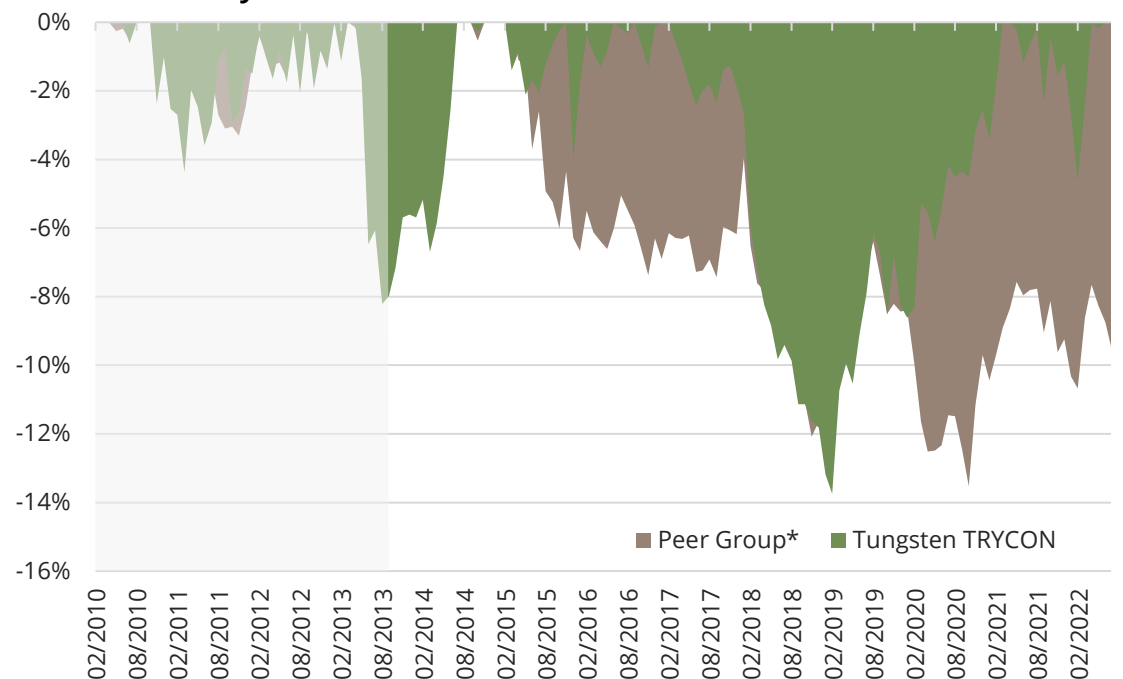

- Top 3 markets**
- 1) 10yr bonds Germany
 - 2) 3 mth USD rates
 - 3) 10yr bonds USA
- Bottom 3 markets**
- 1) equity index Italy
 - 2) 10yr bonds Italy
 - 3) 10yr bonds Australia
- (Key futures markets by contribution to performance)

Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%.
