

## Tungsten TRYCON AI Global Markets

### Monthly Comment

In the equity markets, the strategy recorded a modestly positive contribution. It was profitable in equity indices in Europe and the U.S., with the best individual results coming from the FTSE-100 and Turkey's BIST 30. By contrast, the portfolio suffered losses in Asia, for example in the Hang Seng China Index. Trading in government bonds was dominated by losses mainly from European bond futures, particularly from short positions in UK and French bonds in an environment of rising prices in the reporting month. In Canadian and U.S. bonds, on the other hand, the strategy was able to cushion losses in the sector to some extent with a successful alternation of long and short positions. Currencies also contributed negatively, mainly driven by the surge of the yen against the US dollar. Conversely, the portfolio gained from the appreciation of the Mexican peso against the U.S. dollar, for example. The strategy was able to profit from the decline in equity market volatility in the U.S. and Europe, while it incurred a loss in money market futures due to the expectation of less sharply rising U.S. interest rates.

## Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

## MSCI ESG rating and distribution

## Product classification according to SFDR: Article 8

- Consideration of ESG & sustainability criteria in the investment strategy
- Scope of the taxonomy regulation
- Exclusion criteria are applied

## Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

## Correlation since 09/2013 (monthly data)

## Key markets

### Top 3 markets

- 1) equity index UK
- 2) MXN / USD
- 3) EUR / USD

### Bottom 3 markets

- 1) JPY / USD
- 2) 10yr bonds UK
- 3) 10yr bonds France

(Key futures markets by contribution to performance)

## Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%.
