

Tungsten TRYCON AI Global Markets

Monthly Comment

The strategy was able to take advantage of an environment of rising prices in global equity markets in the first half of the month and subsequently reduced some of its equity exposure. The strongest gains were achieved in the S&P 500 Index, the Nasdaq 100 Index and the DAX Index, as the portfolio participated in increasing prices here. By contrast, it incurred moderate losses in some Asian indices, such as the IFSC Nifty 50 Index and the KOSPI 200 Index. The strategy recorded a largely neutral contribution from government bonds, generating gains from falling Bunds and UK bonds, which were offset by losses from short positions in 10-year US government bonds. In money market rates, the strategy benefited in particular from the correct anticipation of higher interest rates in the UK. The picture in currencies was largely neutral: Gains from the rise in the AUD and the fall in the JPY were offset by losses from the depreciation of the MXN against the USD. Finally, the strategy was profitable with its positioning on declining equity market volatility.

TUNGSTEN

Investment Funds

Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

MSCI ESG rating and distribution

Product classification according to SFDR: Article 8

- Consideration of ESG & sustainability criteria in the investment strategy
- Scope of the taxonomy regulation
- Exclusion criteria are applied

Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

Correlation since 09/2013 (monthly data)

Key markets

Top 3 markets

- 1) E-Mini S&P 500 Index
- 2) E-Mini Nasdaq 100 Index
- 3) VIX Index

Bottom 3 markets

- 1) 10Y Treasury Notes
- 2) JGS Nifty Index
- 3) US Treasury Long Bonds

(Key futures markets by contribution to performance)

Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%-10%.
