

Tungsten TRYCON AI Global Markets **Dynamic**

Monthly Comment

European equity markets in particular posted strong gains over the month. The strategy benefited broadly from this, in particular through long positions in the DAX-40 and FTSE-MIB, but also in North American indices such as the S&P 500. In contrast, the portfolio suffered moderate losses as a result of the correction in the Nikkei in the last quarter of the month. The portfolio posted a small loss in government bonds in January. Although the strategy benefited from a combination of long and short signals in Canadian government bond futures and from the rise in Japanese bond yields, losses in Italian and US bonds outweighed these gains, as a change in direction from rising to falling yields took place around the middle of the month. In currencies, losses from the rise in the JPY (also in mid-month) against the short position held here were the main focus, along with losses in MXN trading which were only partly offset by gains in the CHF, where the strategy was successful in both directions.

For regulatory reasons, the historical performance as a chart can be shown no sooner than 12 months after launch.

Fund description

The fund's objective is to provide absolute returns with a medium risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets Dynamic pursues a systematic multi-asset long/short strategy. It uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

Performance attribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

Key markets

Top 3 markets

- 1) DAX40 Index
- 2) E-Mini S&P 500 Index
- 3) FTSE/MIB Index

Bottom 3 markets

- 1) JPY / USD
- 2) MXN / USD
- 3) 10Y Treasury Notes

(Key futures markets by contribution to performance)

Risk allocation by sector per month end

For regulatory reasons, the drawdown analysis can be shown as a chart no sooner than 12 months after launch.

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 10%-20%. * Cash = bank (term) deposits and short-term government bonds.
