

Tungsten TRYCON AI Global Markets

Monthly Comment

The strategy capitalized on the moderate equity market uptrend in July. Positive contributions were driven primarily by long positions in the Nasdaq 100, FTSE/MIB, and KOSPI 200, while short positions in India's Nifty 50 added further gains. Offsetting factors came mainly from European indices, notably short positions in the FTSE 100 and Euro STOXX Banks, but also from the SET50 in Thailand. In bonds, gains from short positions in U.S. government bond futures were mostly offset by losses in European bond futures. A short position in Canadian government bonds provided an additional positive contribution, resulting in an overall positive sector outcome. The currency segment was weak overall: despite solid results from short positions in JPY and EUR, losses from long positions in GBP, AUD, and CAD led to a negative contribution. The strategy benefited from declining equity market volatility, while results in money market futures largely offset one another.

1) Until 08/2013 the fund predominantly followed a trend following strategy. Since 09/2013, quantitative models dominate the strategy. The historical statistics are based on the track record since 09/2013. 2) A third AI model family was added to the strategy in January 2019. 3) The YTD performance for 2013 relates to the period from Sep. to Dec. for the current strategy mix. 4) Risk-free rate: Euribor (3m). * "Peer Group": HFRU Macro Index. It represents UCITS compliant Macro funds (incl. systematic) and CTAs and is denominated in EUR. The Tungsten TRYCON fund is part of this index. ** Cash = bank (term) deposits and short-term govt. bonds.

Fund description

The fund's objective is to provide absolute returns with a moderate risk profile and low correlation to equity markets and other investments. The underlying trading models are based on Artificial Intelligence.

The Tungsten TRYCON AI Global Markets pursues a systematic multi-asset long/short strategy. Since September 2013, it uses quantitative models based on Artificial Intelligence to identify trading opportunities in the financial markets. Periodic re-learning leads to regular updates of the models. The investment universe comprises some 60 global equity, bond, interest rate and currency markets. In these markets, the fund can take both long and short positions using regulated, liquid and exchange-traded financial instruments. The portfolio is dynamically adjusted to changing market conditions in accordance with a strict risk management. The strategy is characterized by low correlation with traditional investments.

Performance contribution by sector

The sector performance attribution is intended to be indicative and to give an estimate of winning and losing components of the derivative positions in the fund. The results do not include fees/expenses or contributions from the cash/bond portfolio and do not add up to the aggregate fund performance.

Correlation since 09/2013 (monthly data)

Key markets

Top 3 markets

- 1) JPY / USD
- 2) 10Y Treasury Notes
- 3) EUR / USD

Bottom 3 markets

- 1) GBP / USD
- 2) AUD / USD
- 3) Euro Bund

(Key futures markets by contribution to performance)

Risk allocation by sector per month end

Risk allocation is based on a proprietary measure. The information is intended to give an indication of the portfolio's allocation. A large level of cash and short-term bonds is inherent to the strategy, the average margin allocation is 5%-10%.
