

Tungsten PARITON UI

Monthly Comment

EXUBERANCE – Short August wrap: Japanese equities hit new all-time highs. Chinese equities rallied strong hitting new 10y highs. UK30Yr debt rose to 28 year highs. Corporate credit spreads hit record lows. And then we had unusual dovish Powell comments at Jackson hole indicating room for lower interest rates. With S&P500 up roughly 30% from April lows and clear speculative signs like in Meme stocks and Zero Day options, one wonders why we need easier money. Equities getting more and more expensive absolute and in several relative measures. In fact, it has never been so expensive before. If you think in decades, no worry - it should end fine to invest here. But any shorter horizon, equities don't look really recommendable here. But what does, except downside protection? Since we are not here to call any tops, we go with slight overweighs in equities and use the cheap options to protect them.

Fund description

The Tungsten PARITON UI strategy aims to achieve a stable absolute return by combining several different asset classes in a multi asset portfolio.

The Tungsten PARITON UI fund considers only those assets that deliver an attractive risk/return ratio. To avoid a one-sided allocation, weights to these assets are assigned using a special risk balancing method. The employment of such risk balancing promises high risk-adjusted returns (Sharpe ratios) as the aggregate portfolio risk is managed very effectively. Due to the low risk nature of certain asset classes the fund may employ leverage in order to achieve a relatively constant level of volatility. The expected return of the strategy is 3%-6% p.a. above Euribor (1m).
